

*Our education system should encourage every person to achieve his or her full potential and become part of a cooperative society. But the wealthy and their corporations have imposed a punitive system that provides dwindling funding while demanding higher standardized test scores.*

*We need a political, social, and economic system in which we take care of all of our needs and insure the health of our planet. The current system creates ever-increasing profits for the few. The rest of us make do with less while we face environmental degradation and endless war.*

*We can democratically create a system that works for all of us. Let's retire the politicians and corporate bosses and build a movement for real change.*
