

Under our market driven system, real estate developers build housing for profit. Because everyone needs a place to live, demand is high and the price of housing goes up faster than wages and the average rate of inflation.

The rapidly increasing cost of housing has made it an attractive investment. Speculators buy up not only rental property, but home mortgages as well. Manipulation of the home loan market by financial institutions caused the bubble to burst, and now ordinary homeowners and tenants face foreclosure and eviction.

We need homes that are part of a community in which we work, go to school, shop, and enjoy recreation. We should not be pushed out of town by high rents and home prices. We should not face homelessness because the very wealthy who control the economic system would rather board up homes than make them affordable.

We will not get what we need until we join together. We can build a movement to change our economic system from one that promotes profits for a few to one which ensures the well being of all.
